

I felt adequately prepared for this placement  
(e.g. realistic expectations, physically, animal  
handling skills, back ground knowledge)

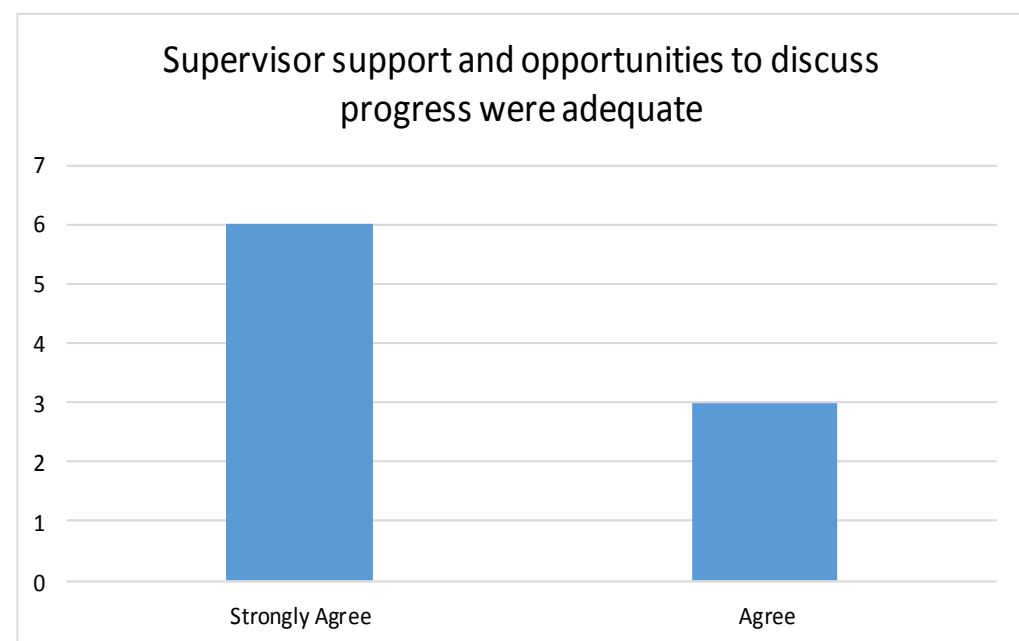

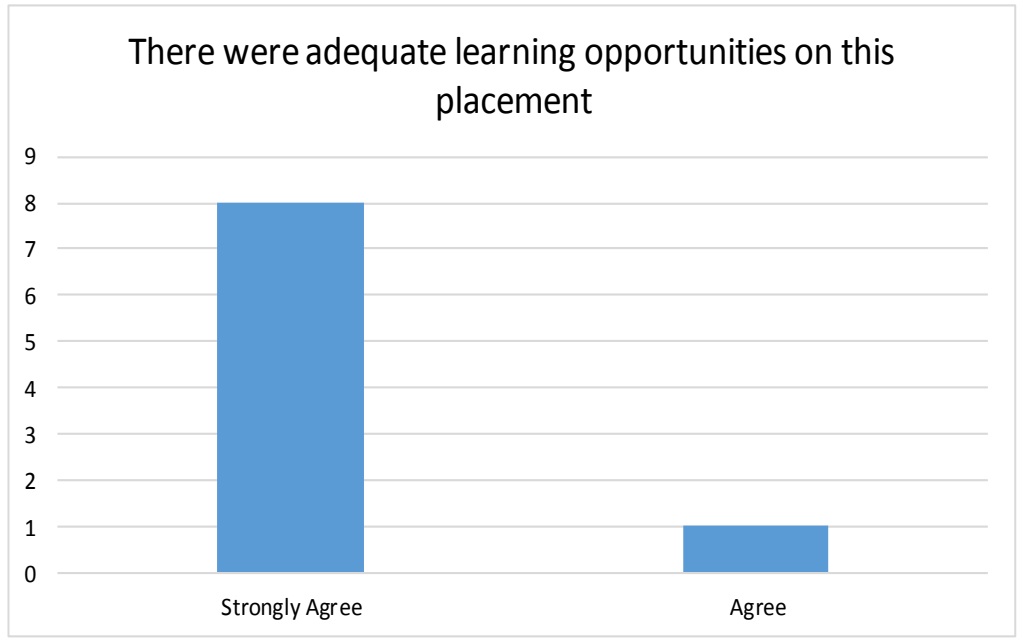

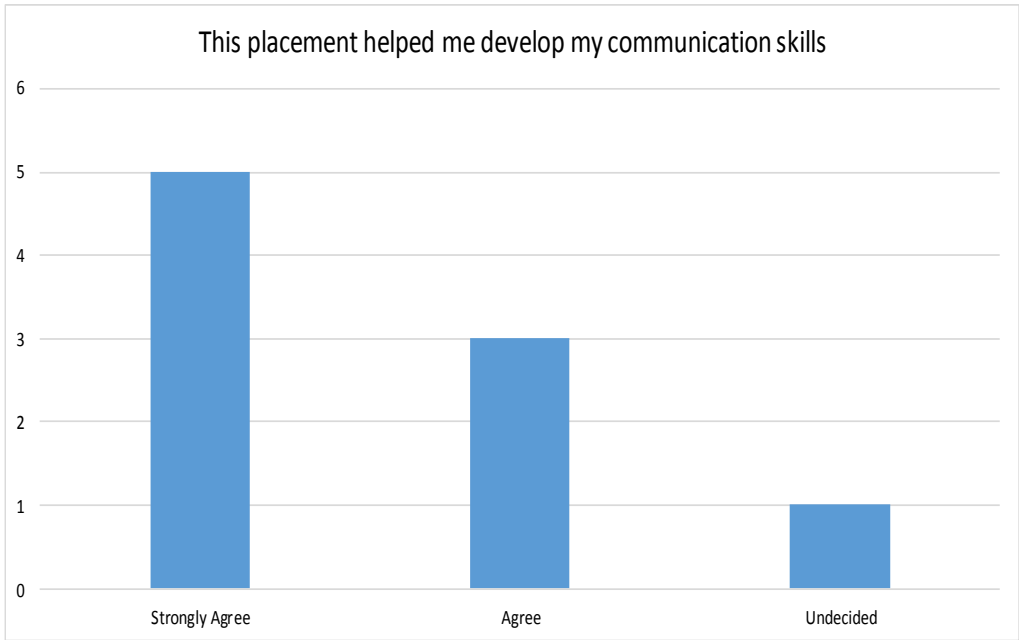

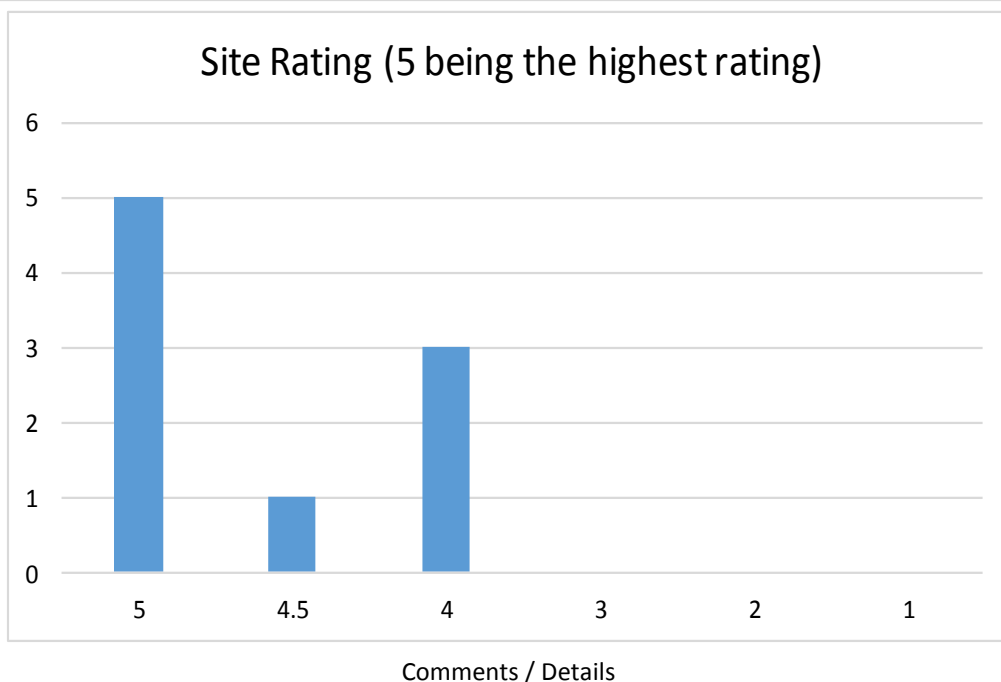

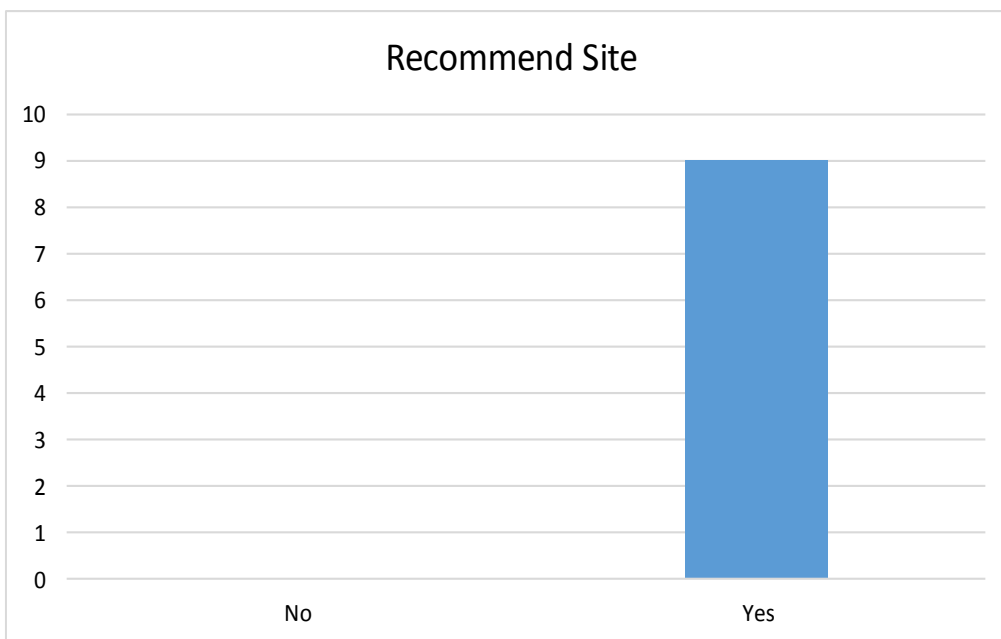

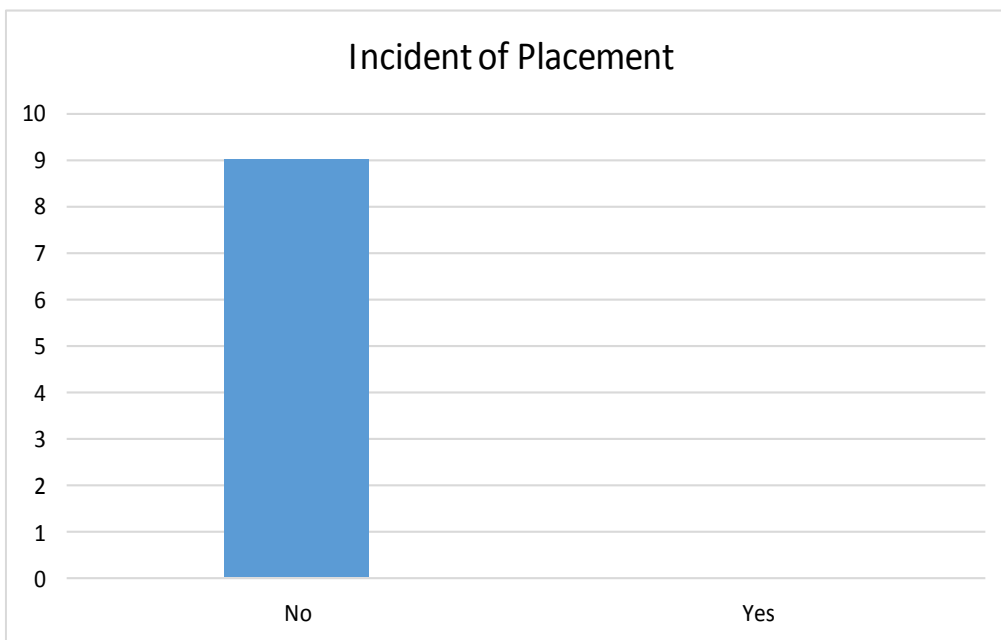

This placement had adequate opportunities to discuss business  
management

There were adequate opportunities to examine animals and practice skills  
on this placement

If your want to they allow you to do a lot, but provide heaps of support  
 Recommended for 3rd years as ample opportunity to practise many skills

One of the best placements I've been on during my entire uni degree. Supervisors were really supportive and keen for you to get very hands-on and do as much solo work as you're comfortable with. Really great place to spend time out in surgery working on catheters, blood taking, intubation, dentals and neutering surgeries

Murray Bridge has accommodation available on request
