Horse Vaccinations

	Disease	Vaccine	Foals	Adult Horses
First vaccination	Strangles Tetanus	Equivac 2 in 1	12 weeks of age	Any age
Second Vaccination	Strangles	Equivac 2 in 1 or Equivac S	14 weeks of age (2 weeks later)	2 weeks later
Third Vaccination	Strangles Tetanus	Equivac 2 in 1	16 weeks of age (2 weeks later)	2 weeks later
First Yearly Vaccination	Strangles Tetanus	Equivac 2 in 1	16 months of age (12 months later)	12 months later
Ongoing Protection	Strangles	Equivac 2 in 1 or Equivac S	Every 12 months	
	Tetanus	Equivac 2 in 1 or Equivac T		
Pregnant Mares	Strangles Tetanus	Equivac 2 in 1	No less than 2 weeks before foaling	

Injured Horses- If the horse has no history of vaccinations they will need a Equivac TAT for immediate protection and a Equivac T for long term protection, they then will need to start the course.

What is Strangles?

Strangles is a respiratory disease of horses. This is a highly contagious bacteria infection.

Strangles is spread by the nasal discharge of infected horses, this can be transmitted through the contact between horses, equipment, tack, feed and water.

Signs of Strangles

- Fever, depression, loss of appetite
- Discharge from the nose, swollen glands around the throat and lower jaw which can form an abscess.
- Pneumonia
- Death.

First signs develop 3-4 days after infection.

Infected horses must be isolated and rested for 3 months.

What is Tetanus?

Tetanus occurs when a wound becomes infected, the bacteria commonly lives in the soil where horses and other animals are kept.

The Spores from the bacteria enter the wound and rapidly multiply, they then produce a toxin that affects the nerves and muscles.

Signs of Tetanus

- Prolapsed third eyelid
- Stiffness of leg muscles (stiff legged gait)
- Paralysis of the respiratory muscles quick leading to death.

The first signs of tetanus usually occur 1-3 weeks following a wound.

**Equivac 2 in 1**

- Tetanus and Strangles
- Given into muscle

**Equivac S**

- Strangles
- Given into muscle

**Equivac T**

- Tetanus
- Given into muscle

**Equivac TAT**

- Tetanus anti-toxin.
- Immediate & short term protection
- Given under the skin
